

In the context of humanity, the mainstream modern human sciences have lost a whole vision of human nature that in turn they have failed to understand human phenomenon properly. In the context of religiosity (Islam), the materialist-secular modern human sciences are contrary to the principles of faith and nobility of human being. In the context of Indonesia, the secular modern human sciences are not suitable with Pancasila (Five Principles). Therefore we need holistic understanding to resolve these issues. This conference, IC-THuSI, invites kindly any professors, scholars, researchers, and academicians who are interested with this issue to write up the scientific papers. The core theme of this conference is "Generating Fresh Thoughts on Human Sciences the perspective of Islam". For more detail information please visit us: <http://ic-thusi.net/>
